

# Active Dashboards In Construction

# What is Active Dashboards?

**Active Dashboards is a graphical reporting tool that automatically retrieves data from multiple databases and presents your information using a range of interactive charts. Effectively tracking the progress, issues and risks associated with construction projects can be a major challenge. Having relevant and timely information at your fingertips can make all the difference.**

That is where the Active Dashboards reporting solution has immediate impact and delivers real improvements in decision-making. The simplicity and power of Active Dashboards is that it can connect directly to the information stored by your existing software applications to provide you with new insights into your results. Information is dynamically presented in powerful, intuitive graphical formats that immediately and clearly reveal opportunities and issues.

Drill-down facilities within the software enable users to instantly access underlying data to directly reveal factors affecting the success of your business.

Active Dashboards is able to combine data from multiple sources enabling you to gain greater value from disparate software applications.

Active Dashboards is designed to enable proactive decision-making and to ensure that trends and in-depth analysis are simply a mouse click away.

## What can Active Dashboards do for us?

Many major construction companies are already benefiting from using Active Dashboards to make faster, better informed decisions every day. Active Dashboards delivers powerful reports via a standard web browser. This ensures that all users have access to a common view of results – providing them with the information they need, when they need it, wherever they need it. It also reduces an organisation's reliance on ad-hoc reporting tools such as Microsoft Excel spreadsheets.

## Benefits include:

- **Cost savings:** Tracks staff and resources in real-time and reveals variances and cost-saving opportunities.
- **Time savings:** Instant reporting eliminates time spent maintaining Excel spreadsheets and manual reports.
- **Rapid returns:** We tailor our proven industry-standard reporting templates to rapidly meet your specific needs in areas such as: Earned Value Analysis (EVA), Health & Safety, Operations, Starters & Leavers, Progress Reporting and Project Issues.
- **Rapid resolution of issues:** Providing an early warning of problems to enable corrective actions to be taken sooner.

# Active Dashboards - Building Better Businesses

## How is Active Dashboards being used in Construction?

Active Dashboards can be used at all levels of an organisation, with examples including:

- **Board level:** Identify which projects are overspending and where. Monitor the financials of each department. Provide a board level overview which aids better-informed decision making.
- **Project Management:** Monitor milestones, the progress of every stage of the project, resource usage and risk management.
- **Financial Management:** Improve the clarity and availability of financial measures such as budgeting, forecasting, cash position, earned value analysis, cost performance and variance.
- **Supplier Management:** Track performance against Key Performance Indicators (KPIs) of suppliers and subcontractors.
- **HR:** Monitor staff contracts, health and safety issues, sickness levels, trends and payments.

## Key Features:

- **Accessible:** Dashboards are viewed simply by using a standard browser to communicate results quickly and easily to everyone that needs them and can be viewed regardless of location.
- **Structured:** Structures your information in a way that allows you to spot opportunities and highlight issues.
- **Customised:** Our installation consultant works with you to tailor our template dashboards to meet the unique needs of your organisation and enable you to maximise the value of your data.
- **Compatible:** Works with your current databases to convert your data into valuable management information.
- **Interactive:** Active Dashboards charts allow you to drill down into detailed underlying information to aid faster, better informed decision-making.
